Proceedings of the Indian Academy of Sciences

(Chemical Sciences)

Volume 96, 1986

CONTENTS

Inorganic and Analytical

Electrochemical and spectroscopic studies on some pyridyl and morpholyl adducts of (*meso*-tetraphenylporphyrin) chromium(III) chloride
S P Roe, R J Magee and J O Hill 1–8

Preparation and characterisation of phosphate and arsenate apatites of barium and their solid solution
P V R Rao, B Dey, S K Gupta and T S B Narasaraju 9–12

Kinetics of oxidation of fluorene by alkaline hexacyanoferrate(III)
M Krishna Pillay and N Nagasundaram 13–19

Mixed valency in the high-temperature phases of transition metal molybdates, $AMoO_4$ (A = Fe, Co, Ni) *R A Mohan Ram and J Gopalakrishnan* 291–296

Enthalpy and entropy changes associated with mixed ligand chelates of Cu(II) and Ni(II) with 4-methoxy picolinic acid N-oxide and some amino acids in aqueous medium *C H Sarala Devi and M G Ram Reddy* 297–300

Kinetics and mechanism of oxidation of $S_2O_3^{2-}$ by potassium *bis* (tellurato) cuprate(III) *G P Panigrahi and A C Pathy* 301–308

Structure and stability of complexes of thiohydantoin derivative
R M El-Bahnasawy, M M Shoukry and M M Hussein 309–313

Infrared study of $FeO \cdot OH \rightarrow Fe_2O_3$ thermal transformation
M Samira Rabie and Hajjar Balkees 315–320

Organic

Anisochrony of O-methylene protons of ethyl ester functions and structural factors in the connected chiral entities *S N Balasubrahmanyam* 21–58

Oxidation of substituted phenols with metal dioxygen carrier, Co(salen) pyridinate: solvent effects *S Satish and P A Ganeshpure* 59–65

Polychalcone derived from 8-acetoxyquinoline-5-aldehyde *H S Patel* 321–326

Physical and Theoretical

Reinvestigation of the antifungal activities of some aromatic N-oxides
Arabinda Ray, S K Noor Mohammad and G V Kulkarni 67–71

The identification and origin of N-H group overtone and combination bands in the near infrared spectra of 2-thio-pyrrole-1,2-dicarboximides
S Ram, O P Lamba and J S Yadav 73–83

Studies on I-V characteristics of dark and photoconduction in methylbixin
Dilip Ghosh, Prabir Pal, K M Jain and T N Misra 85–89

Crystal spectra of methiodidessof some nitrogen heteroaromatics
M Pal and S Bagchi 91–95

Simple equations for predicting volume properties of aqueous concentrated electrolyte mixtures *Anil Kumar* 97–101

Excited state relaxation and energy transfer between $Tb^{3+} \rightarrow Nd^{3+}$ and $Tb^{3+} \rightarrow Ho^{3+}$ in $POCl_3:SnCl_4$ *Janardan Joshi and J C Joshi* 103–113

Anomeric effect in carbohydrates—An *ab initio* study on extended model systems *P Kaliannan, S Vishveshwara and V S R Rao* 327–339

Photoprocesses in sodium decyl sulphate micellar media
D B Naik and P N Moorthy 341–350

What is the maximum yield in the solid state cinnamic acid dimerisation? A combinatorial mathematical approach
Gautam R Desiraju and V Kannan 351–362

Rotational isomerism and barriers to internal rotation in 3-halopropenes by SCF-MO methods *V Santhanam and J Sobhanadri* 363–371

The scaled one-electron Hamiltonian model for open-shell LCAO-MO-SCF calculations: Further corrections to the SOEH energy
Kalyan Kumar Das and Sankar Prasad Bhattacharyya 373–382

Rapid Communications

Determination of the number of *d* electron states in catalysts
G Sankar, P Sen, S Vasudevan and C N R Rao 115–120

Magnetic susceptibility studies of lead oxyhalide glasses containing transition metal oxides *B G Rao, N Y Vasanthacharya and K J Rao* 383–388

Special issue in dedication to Prof. Sadhan Basu on his 65th Birthday

A generalization of Brillouin's theorem and the stability condition in the quantum-mechanical variation principle in the case of general trial wave functions *Per-Olov Löwdin* 121–126

Translational and rotational symmetries in third integral derivatives
James O Jensen, Ajit Banerjee and Jack Simons 127–134

Applications of a novel algorithm for the calculation of MCSCF wavefunction: a look into possible avenues of convergence acceleration
Kalyan Kumar Das, Debashis Mukherjee and Sankar Prasad Bhattacharyya 135–143

Linked-cluster theorem in open shell coupled-cluster theory for mp-mh model space determinants *D Mukherjee* 145–154

Cluster expansion of the wave function. Potential energy curves of the ground and excited states of CO *O Kitao and H Nakatsuji* 155–166

The quantum chemistry of valency *M S Gopinathan* 167–176

Direct calculation of energy differences, such as ionization potentials *W Kutzelnigg, H Reitz, S Durmaz and S Koch* 177–194

Dynamics of bond-formation in some bound states of HeH^+ *Ch V Rama Rao and Asish K Chandra* 195–205

The diabatic energy surface for H_3 *Mayumi Okada and G G Hall* 207–214

Absorption spectrum for the transition state $H_3^{\neq}$—A quantum mechanical model study *Sudeshna Sinha, N Sathyamurthy and K Banerjee* 215–222

Approximate multiconfiguration variational calculations using partially localized orbitals *G P Das* 223–229

Improved Z-dependence of the ground-state energies of neutral atoms *P K Chattaraj, A Mukherjee, M P Das and B M Deb* 231–239

Compton profiles of atoms from electron densities via reciprocal form factors *Shridhar R Gadre and Subhas J Chakravorty* 241–248

Sum rules in inelastic gas-surface scattering *Ramakrishna Ramaswamy* 249–252

Ab initio calculations on lithium-bonded dimers: a brief review *A B Sannigrahi, Tapas Kar and B Guha Niyogi* 253–262

Currents, kinetic energy, and molecular magnetism *R McWeeny* 263–273

Direct space symmetry adaptation of crystal orbitals *Jean-Louis Calais* 275–279

Semi-empirical calculations of static molecular polarizability using CHFT: some benzene derivatives and aromatic heterocycles *Rana Sen and Subirnath Bhattacharyya* 281–284

Geometry optimization of acetonitrile monomer and dimers using CNDO/force method *R Brakaspathy and Surjit Singh* 285–290

Special Issue on Solid State Chemistry

Foreword 389

The synthesis, crystal growth, and characterization of non-stoichiometric magnetite *J M Honig* 391–409

Applications of molecular graphics to zeolite catalysts *A K Cheetham, A K Nowak and P E Betteridge* 411–418

Oxides with a tunnel structure characterized by a mixed framework of octahedra and tetrahedra *B Raveau* 419–448

Synthesis and structure of some interesting oxides of bismuth *J Gopalakrishnan* 449–458

Metal-hydrazine complexes as precursors to oxide materials *K C Patil* 459–464

On kinetics of crystal growth from supercooled melt *Biman Bagchi and T R Kirkpatrick* 465–472

Why are certain substances metallic? *C N R Rao and P P Edwards* 473–498

Nonlinear conduction and electrical switching in one dimensional conductors *S V Subramanyam and Hemamalini Naik* 499–508

Electron-electron interactions in polyacetylene *S Ramasesha* 509–521

On some aspects of metallisation with special reference to iron group transition metal oxides *P Ganguly* 523–532

Ionic conduction in dispersed solid-electrolytes *A K Shukla, N Vaidehi and K T Jacob* 533–547

Electrical transport in two phase mixtures *V B Tare* 549–558

Low temperature properties of glasses-Unsolved problems *A K Raychaudhuri* 559–564

Magnetic resonance lineshapes in powdered and amorphous systems *P Raghunathan and S C Sivasubramanian* 565–580

Behaviour of acceptor states in semiconducting $BaTiO_3$ and $SrTiO_3$ *T R N Kutty* 581–597

The chloro-methyl exchange rule and its violations in the packing of organic molecular solids *Gautam R Desiraju and Jagarlapudi A R P Sarma* 599–605

Subject index 607–614

Author Index 615–617
